What's New in Sustainability Management

- 1 **Sustainability formulas now work directly in Purchase Orders and Purchase Invoices**, enabling automated emissions calculations during purchasing.
- 2 **Expanded value chain emissions tracking** across item journals, reclassification journals, fixed assets, and service management.
- 3 **Scope 3 emissions can now be tracked at lot and serial number level**, ensuring accurate emissions attribution throughout the supply chain.
- 4 **Enhanced ESG layout** with item-tracking level details for improved transparency and auditability.
- 5 **Simplified sustainability administration** with one-click reversal of sustainability journal entries and smarter GL collection processes that prevent duplicate postings.

less than 1% fail, including big and many-company environments.

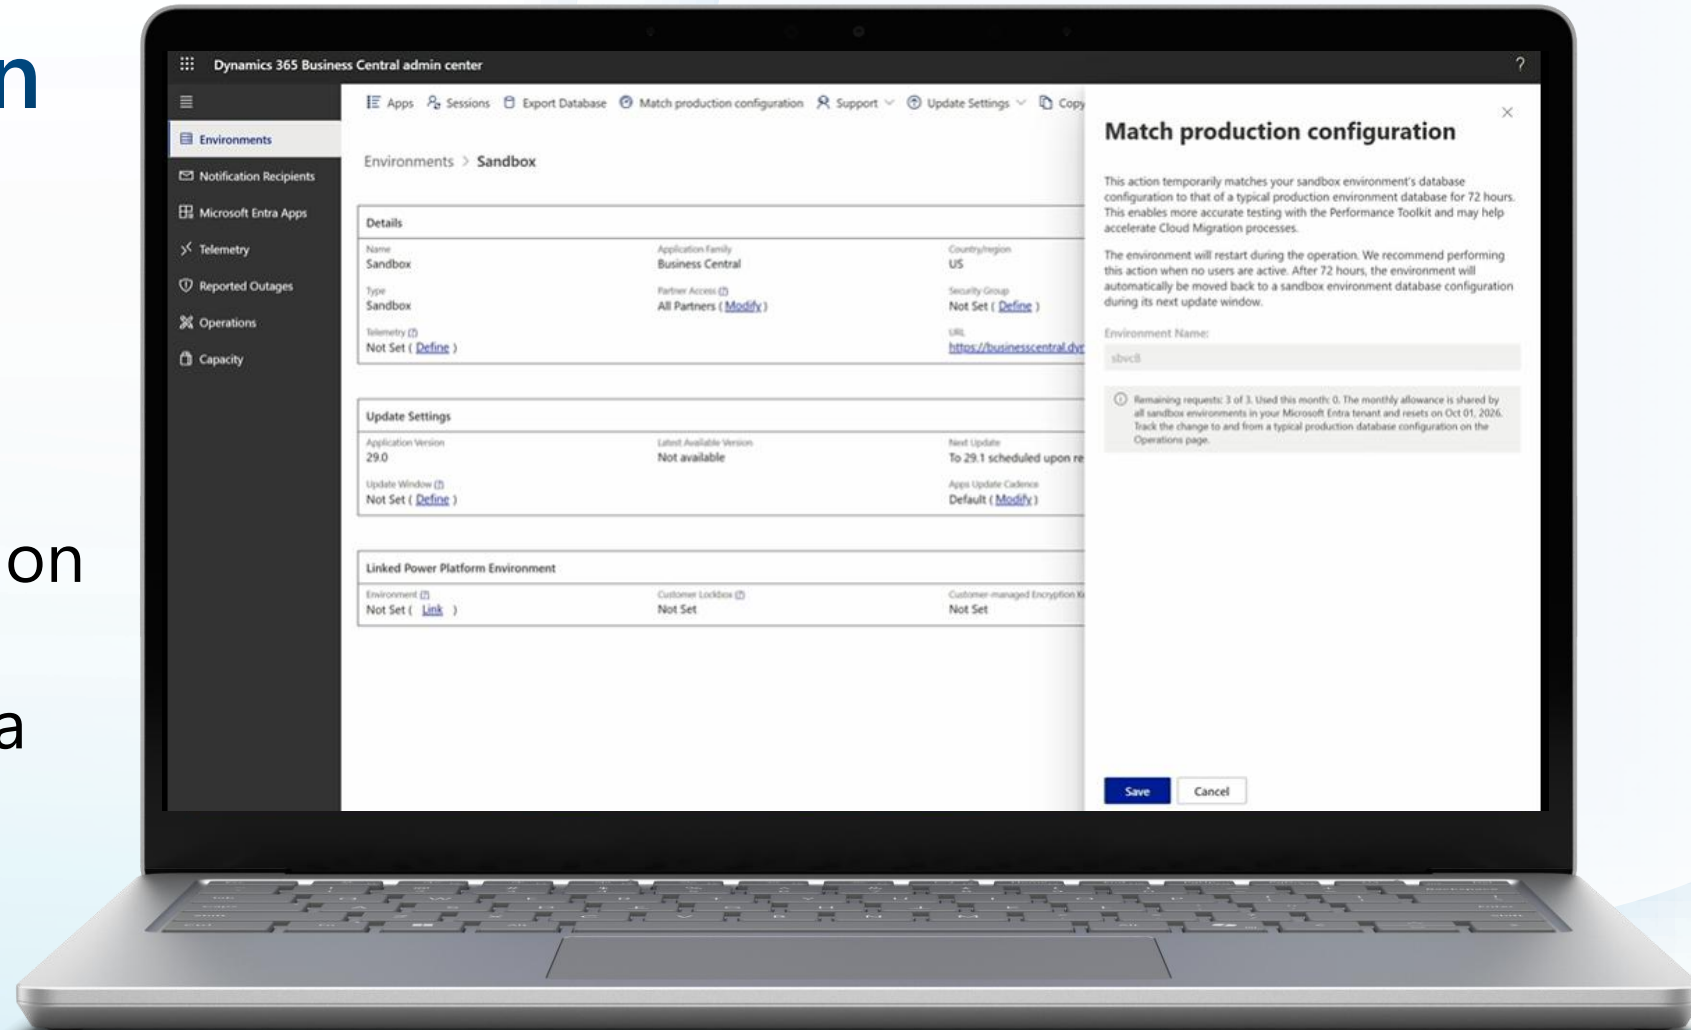

Self-service visibility
progress, results and errors sit on the Operations page.

New

Match Production Database Configuration

Temporarily match the database configuration on your sandbox environment to that of a typical production environment.

Self-billing Invoices

*A smarter way to invoice —
created by the customer, paid
to the vendor.*

The screenshot displays a 'Vendor Card' for '50000 · Nod Publishers'. The interface includes a top navigation bar with links like 'Home', 'Request Approval', 'New Document', 'Vendor', 'Prices & Discounts', 'Report', and 'More options'. Below this is a toolbar with icons for 'Contact', 'Merge With...', 'Apply Template', 'Send Email', and 'Pay Vendor'. The main content area is divided into sections: 'Invoicing' (with fields for Tax Registration No., GLN, Copy Buy-from Addr., Tax Liable, Tax Area Code, Vendor No., Bank Communication, Invoice Disc. Code, Self-Billing Agreement, Registration No., Posting Details, and Foreign Trade), 'Payments' (with a 'CM' button), and 'Receiving'. A right sidebar contains a 'Summary' section with 'Details' and 'Attachments (0)', a 'Vendor Picture' of a man, and a 'Vendor Statistics' table.

Vendor Statistics	
Vendor No.	50000
Balance (\$)	106,800.81
Balance (\$) As Customer	0.00
Outstanding Orders (\$)	946.00

Self-billing Enhancements in This Release

- You can setup Number Series per Vendor
- You can still keep only one if you want
- Added Peppol format and workflow for self-billing

The screenshot displays the Dynamics 365 Business Central interface for a Vendor Card. The vendor is identified as '10000 · Fabrikam, Inc.'. The left sidebar shows a list of vendors, including '10000 · Fabrikam, Inc.', '40000 · Wide World Imports', and '82000 · Bulk'. The main area is divided into sections: 'General', 'Address & Contact', 'Invoicing', 'Posting Details', 'Foreign Trade', and 'Payments'. The 'Invoicing' section is highlighted, showing fields for 'Tax Registration No.', 'GLN', 'Copy Buy-from Addr. to QLT...', 'Tax Liable', 'Tax Area Code', 'Vendor No.', 'Bank Communication', 'Invoice Doc. Code', 'Self-Billing Agreement', 'Self-Billing Invoice Nos.', 'Registration No.', 'Use Registration No. in Ele...', 'Gen. Bus. Posting Group', 'Withholding Tax Liable', 'Withholding Tax Bus. Post.', 'Vendor Posting Group', and 'Currency Code'. The 'Self-Billing Invoice Nos.' field is set to 'SB-FABR', and the 'Invoice Doc. Code' is set to '10000'. The 'Self-Billing Agreement' is a toggle switch that is currently turned on. The 'Posting Details' section shows 'Gen. Bus. Posting Group' set to 'DOMESTIC' and 'Vendor Posting Group' set to 'DOMESTIC'. The 'Foreign Trade' section shows 'Currency Code' set to 'USD'. The 'Payments' section is partially visible at the bottom.

Cross-Environment Master Data Management

How it works: The subsidiary pulls – headquarters publishes a read-only feed and never pushes.

Automatically calculate, post, and track withholding tax on employee expenses while ensuring compliance and complete financial visibility.

The screenshot displays three overlapping windows from the NetSuite interface:

- Withholding Tax Posting Setup Table:** A table with columns for Withholding Tax Bus. Post. Group, Withholding Tax Prod. Post. Group, Withholding Threshold Type, Withholding Threshold Amount, Withholding Tax %, Realized Withholding Type, Calculation Base, Calculation Method, Withholding Threshold Base, Withholding Threshold Period, and Threshold Category Code. The table lists three entries: EXPENSES, MILEAGE, and PER-DIEM.
- Employee Card (EH · Ester · Henderson):** A card showing employee details. The 'Payments' section is expanded, showing 'Employee Posting Group' set to EMPEXP and 'Withholding Tax Bus.' set to WHT-EMPLOYEES (highlighted with a red box).
- Expense Category (MILEAGE):** A form for setting up the MILEAGE expense category. The 'General' section is expanded, showing 'Code' as MILEAGE, 'Description' as 'Expenses for business mileage using a privately', and 'Posting Group' as EXPENSE MILEAGE. The 'Withholding Tax' section is also expanded, showing 'Withholding Selection Mode' as Single Tax and 'Withholding Tax Prod. Post. Group' as MILEAGE (both highlighted with a red box).

What's New in Supply Chain Management

Run manufacturing and logistics operations with greater visibility, flexibility, and control.

- ✓ Accelerate manufacturing with smarter planning and production workflows.
- ✓ Gain greater flexibility in inventory transfers and warehouse operations.
- ✓ Improve product quality with enhanced inspection and compliance processes.

Enhanced Subcontracting in Business Central

Manage subcontracted operations with the same visibility, control, and warehouse capabilities as the rest of your manufacturing process.

- ✓ Multiple component supply models
- ✓ Work-in-progress inventory tracking
- ✓ Integrated warehouse handling
- ✓ Supplier instructions and documentation
- ✓ Enhanced pricing and cost allocation

What's New in Shopify Connector

Enhanced product synchronization with
tariff codes and shipping details

Expanded B2B capabilities for companies,
catalogs, and pricing

Improved order, return, and exchange
processing

Better troubleshooting with API error and
skipped-record tracking

Smarter US sales tax management

AI-powered Tax Matching for Shopify Connector

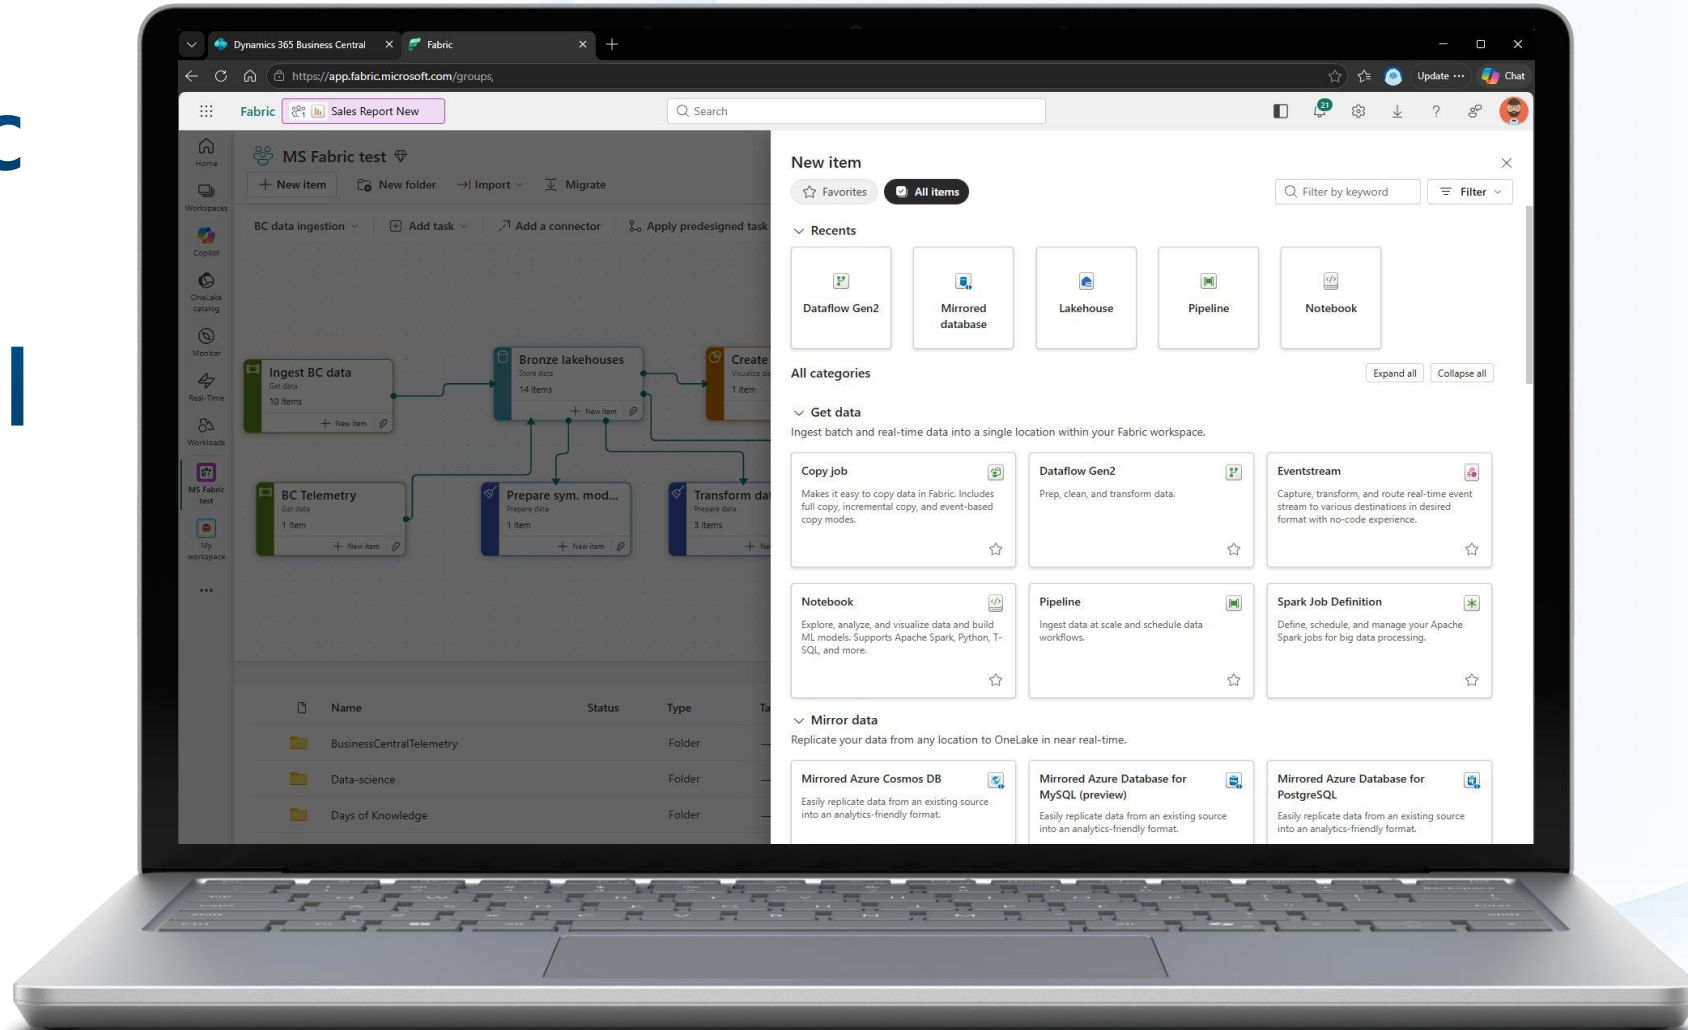

Business Central can now automatically:

- Analyze tax information imported from Shopify
- Match orders to the correct tax areas and jurisdictions
- Create missing tax setups automatically when needed
- Flag exceptions and confidence levels for user review
- Ensure tax calculations remain accurate and consistent across systems

Introducing

Composite Document Layouts

Build professional, branded reports with no code. Coming in 29.0 and 29.1

3 Themes

8+ Header/footer layouts

50+ Body layouts

Financial Reporting Made Simpler

Create, manage, and distribute financial reports more efficiently with improved report design, report packs, and governance capabilities.

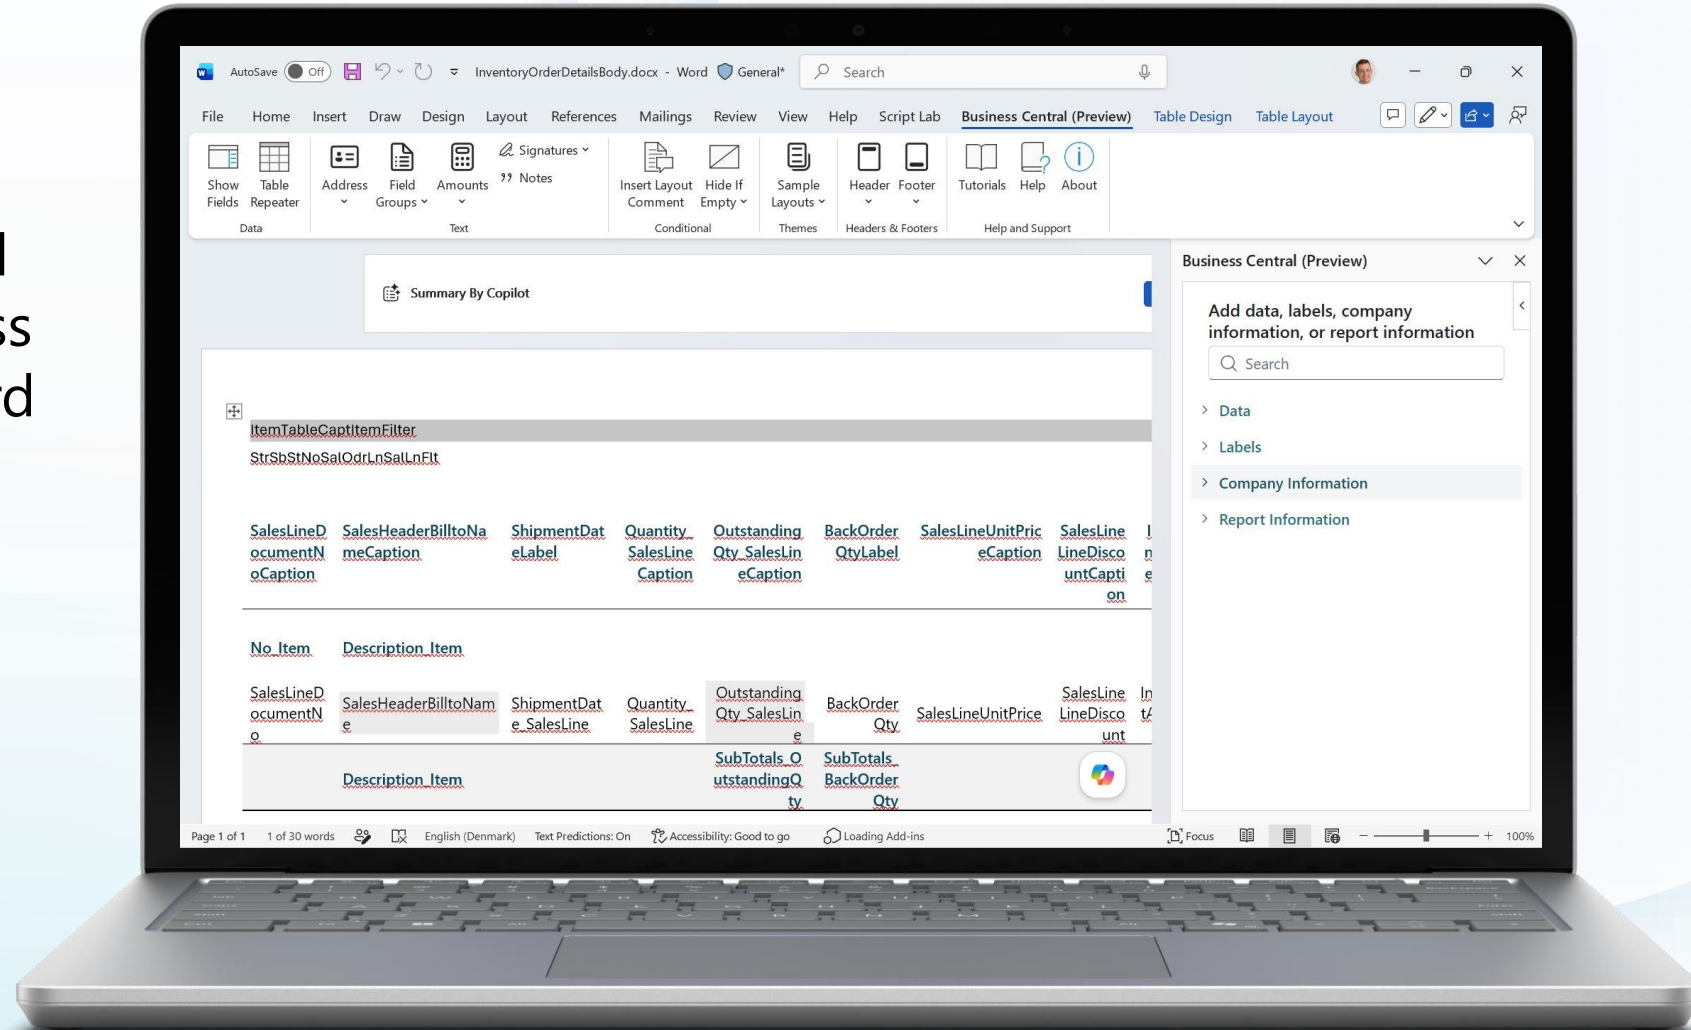

Features for Authors	Features for Users	Features for Administrators
Discover uncategorized accounts on the Chart of Accounts	Run multiple reports and get a single PDF	Automatic change logging: On all financial report setup tables
Track account usage in financial reports		APIs on report inbox
Track which accounts a row or column line sum over		

Design Better Business Documents in Word

Create professional, branded document reports in Business Central using enhanced Word layout capabilities:

- Data picker
- Table builder
- Design controls

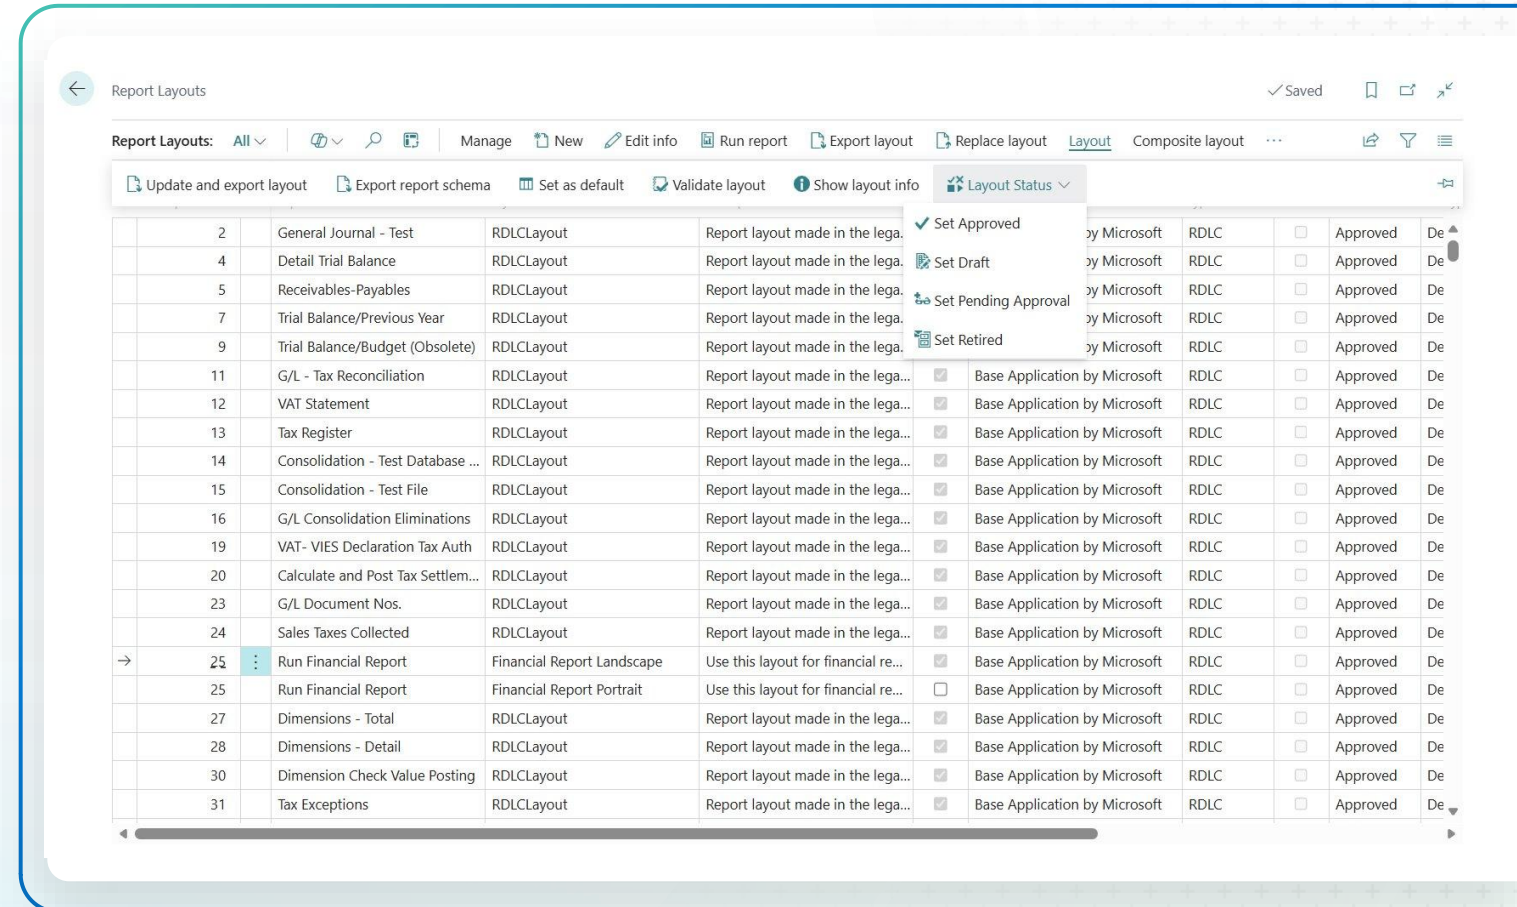

Plus, a "*Hide if*" control for conditional content!

Layout Management and Report Inbox API's

Administrators can control which report layouts are available to users, retire outdated versions without removing them, and customize layout descriptions.

New report inbox APIs also make it easier to automate and manage reporting processes.

The screenshot displays the 'Report Layouts' management interface. At the top, there's a navigation bar with a back arrow, the title 'Report Layouts', and a 'Saved' status. Below this is a toolbar with various actions: 'Update and export layout', 'Export report schema', 'Set as default', 'Validate layout', 'Show layout info', and a 'Layout Status' dropdown menu. The main area contains a table with the following columns: ID, Name, Type, Description, Status, and Actions. The table lists various report layouts, including 'General Journal - Test', 'Detail Trial Balance', 'Receivables-Payables', 'Trial Balance/Previous Year', 'Trial Balance/Budget (Obsolete)', 'G/L - Tax Reconciliation', 'VAT Statement', 'Tax Register', 'Consolidation - Test Database ...', 'Consolidation - Test File', 'G/L Consolidation Eliminations', 'VAT- VIES Declaration Tax Auth', 'Calculate and Post Tax Settlem...', 'G/L Document Nos.', 'Sales Taxes Collected', 'Run Financial Report' (highlighted), 'Run Financial Report', 'Dimensions - Total', 'Dimensions - Detail', 'Dimension Check Value Posting', and 'Tax Exceptions'. The 'Status' column shows various states like 'Set Approved', 'Set Draft', 'Set Pending Approval', 'Set Retired', and 'Base Application by Microsoft'. The 'Actions' column includes checkboxes for 'Approved' and 'De' (likely Deleted).

Latest Enhancements in Data Analysis

Use system audit fields directly in analysis views and pages.

Save time with bookmarked analysis tabs and list views.

Personalize role-based experiences by adding saved views to profiles.

From Re-typing to Straight-through Ordering

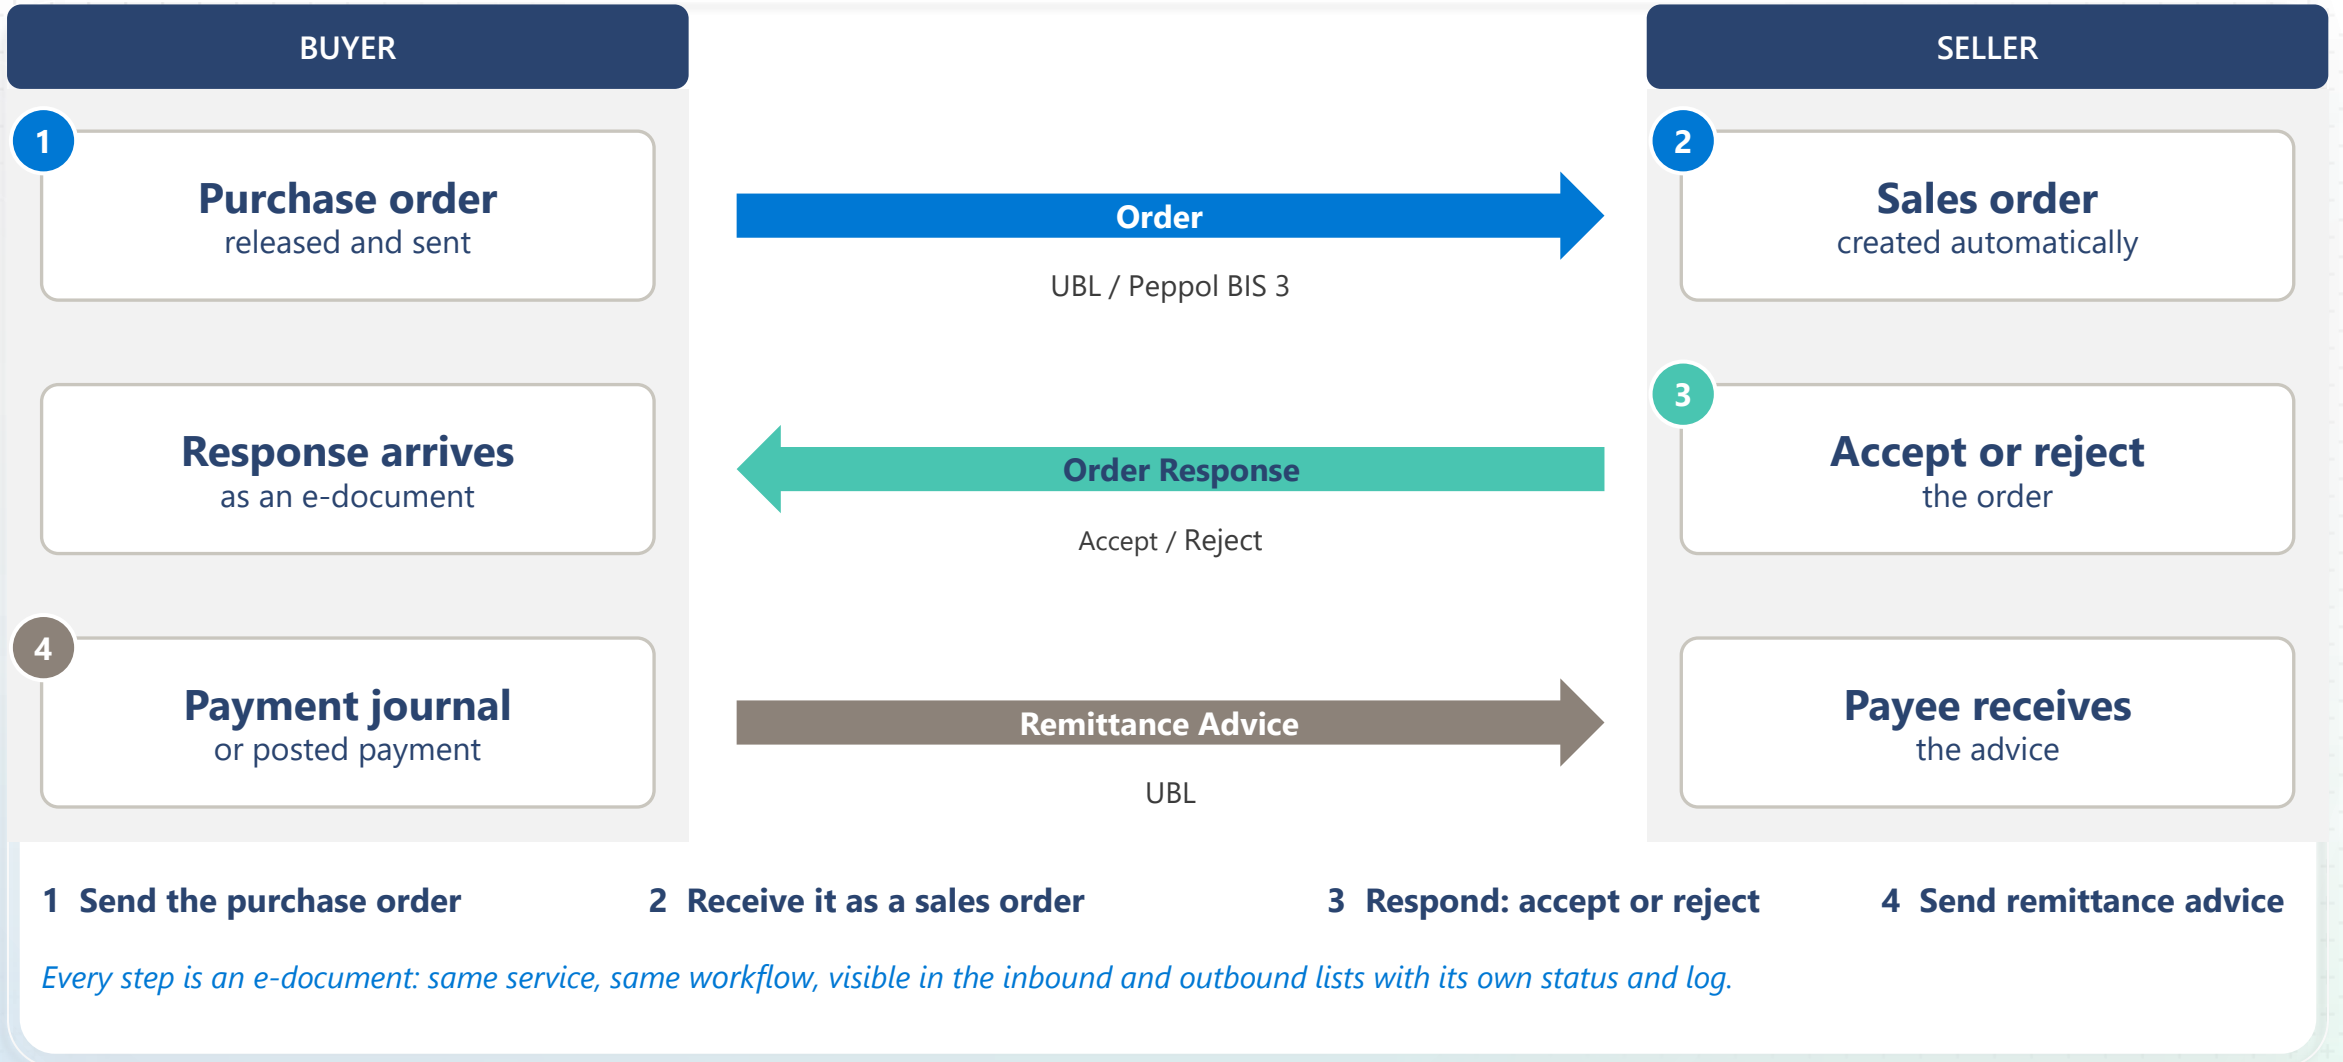

Automate order exchange between customers and suppliers directly in Business Central with new built-in EDI capabilities.

- ✓ The order leaves as a structured document
- ✓ A sales order is created automatically
- ✓ The confirmation comes back as an e-document
- ✓ Remittance advice goes out the same way

Faster, more reliable collaboration with customers and suppliers!

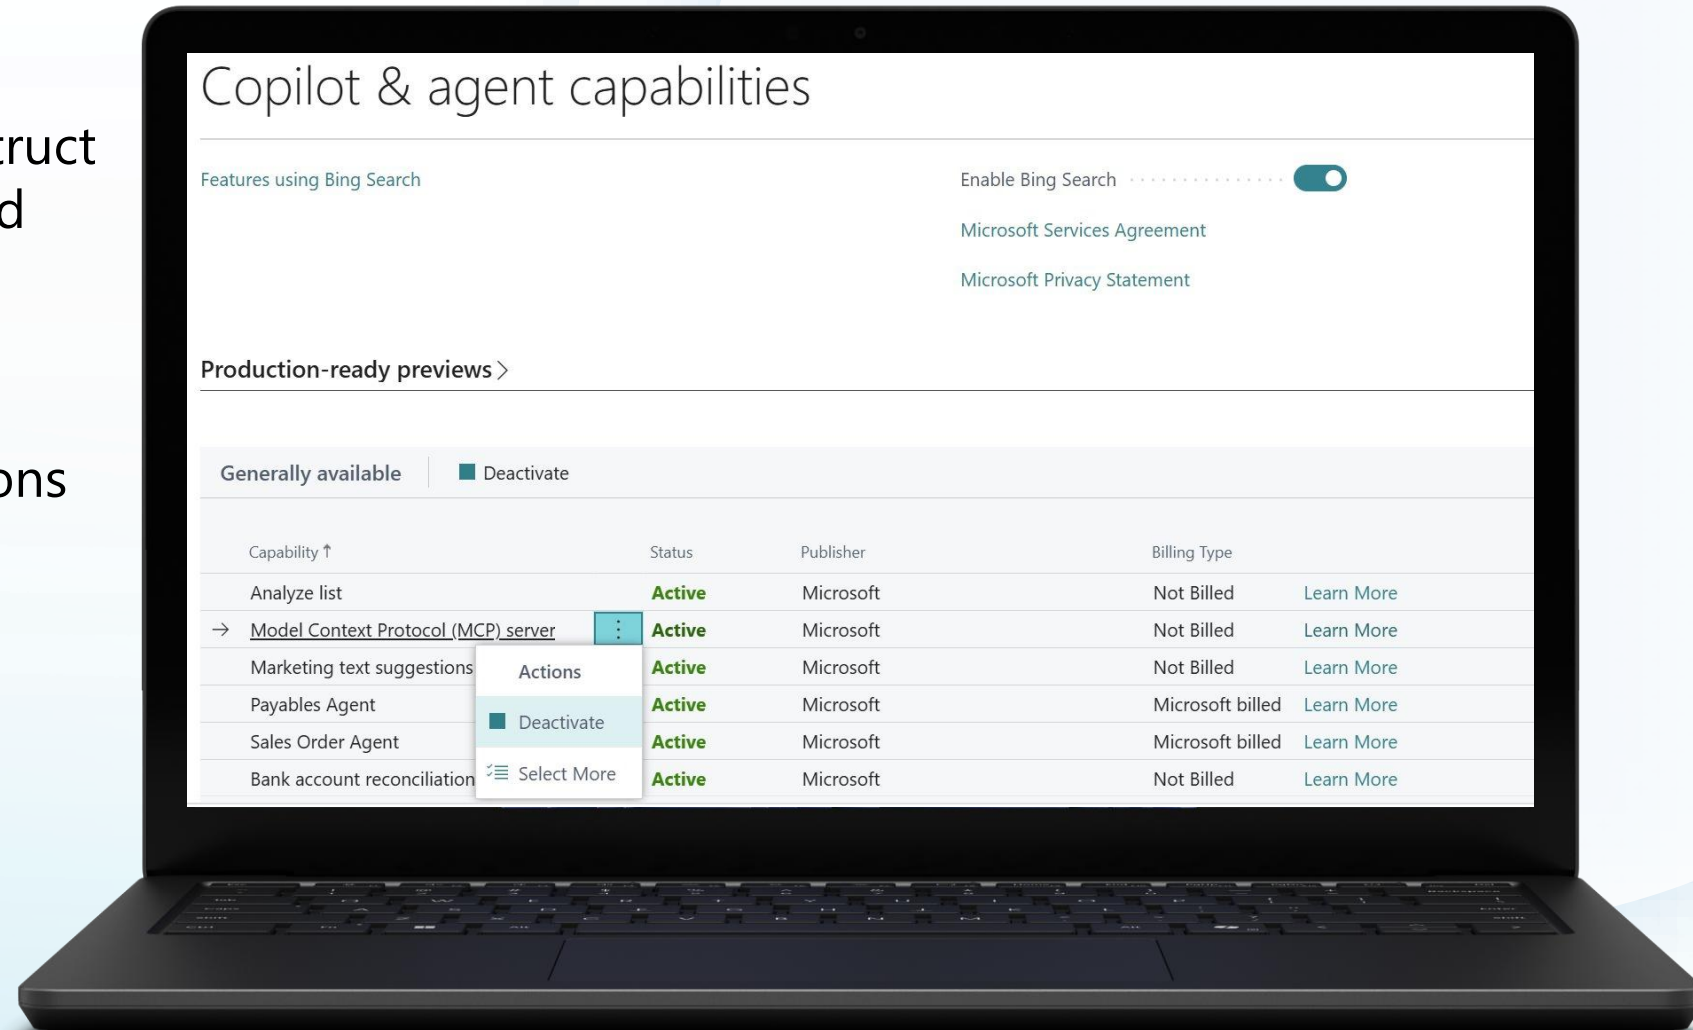

EDI Capabilities and How It Flows

MCP Server Enhancements

- New data query tool. Construct queries that we compile and run to return the data you need — no APIs required!
- Enhanced MCP configurations page experience.
- Turn MCP server on/off centrally

Agentic Development & Troubleshooting in Business Central

Resolve issues faster with agentic developer loop

Business Central's new agentic development capabilities help developers move from problem detection to root-cause analysis and resolution significantly faster by combining AI agents, source-code understanding, debugging, telemetry, and performance profiling in a single workflow.

The screenshot displays the Copilot v1.0.89-1 interface within a development environment. The top navigation bar includes tabs for 'Current', 'Sessions', 'Issues', 'Pull requests', and 'Gists'. The main content area shows a debugging session with the following steps:

- Start snapshot debugging on the next web client session** (13:59): MCP server 'github-proxima' requires authentication. Use `/mcp auth github-proxima` to connect.
- Initialize snapshot debugging** (MCP: `bc-...`): Output too large to read at once (70.0 KB). Saved to: `C:\Users\kberes\AppData...`
- Snapshot debugging is armed and WAITING** for the next 'WebClient' session on the tenant. It captures NOTHING until such a session runs. Reproduce the failing scenario in a 'WebClient' session (e.g. run the AL test / trigger the error) - every AL runtime error is captured automatically, plus any snapshot you supplied. Then call `stop_snapshot_debugging` with `debuggingContext=054e8567-ce30-4196-8be9-77e6c46068df` to finalize and download the snapshot.
- Done, what went wrong?** (14:00): MCP server 'github-proxima' requires authentication. Use `/mcp auth github-proxima` to connect.
- Finalize the capture and inspect the returned exception**, call stack, variables, and source context.
- stop_snapshot_debugging** (MCP: `bc-...`): Output too large to read at once (70.0 KB). Saved to: `C:\Users\kberes\AppData...`
- The capture succeeded for session 28**; I'm reading the generated diagnostic projection to isolate the failure.
- Read 1790683245264-copilot-tool-output-7ca398682e184f22bedbabf3a6523e85.txt** L1:180 (180 lines read)
- Search "sourceWindow|sourceLines|Trim|Item|.Get|ProcessEntry|itemCode"** (`~\AppData\Local\Temp\1790683...` 8 lines found)
- Read 1790683245264-copilot-tool-output-7ca398682e184f22bedbabf3a6523e85.txt** L1060:1180 (121 lines read)
- Updated memory upvote**: Analyze the decoded projection returned by `stop_snapshot_debugging` directly: exc...
- The import failed in Codeunit 50202** `Item Json Importer`, method `ProcessEntry`, at line 28.
- The JSON contained:**

```
{ "itemCode": " I10010" }
```
- There is a leading space before I10010**. The untrimmed value `' I10010'` was used for the item lookup, so no matching Item record was found. The call originated from Page 50201 `Item Import` → `RunImport` → `ImportFromJson` → `ProcessEntry`.

The bottom status bar shows the path `~\OneDrive - Microsoft\AL\BCMcpDemo\ALExtension`, the session ID `Session: 146.61 AIC used`, and the version `v1.0.90-2 downloaded`.

Announcing

Page Scripting Now Generally Available

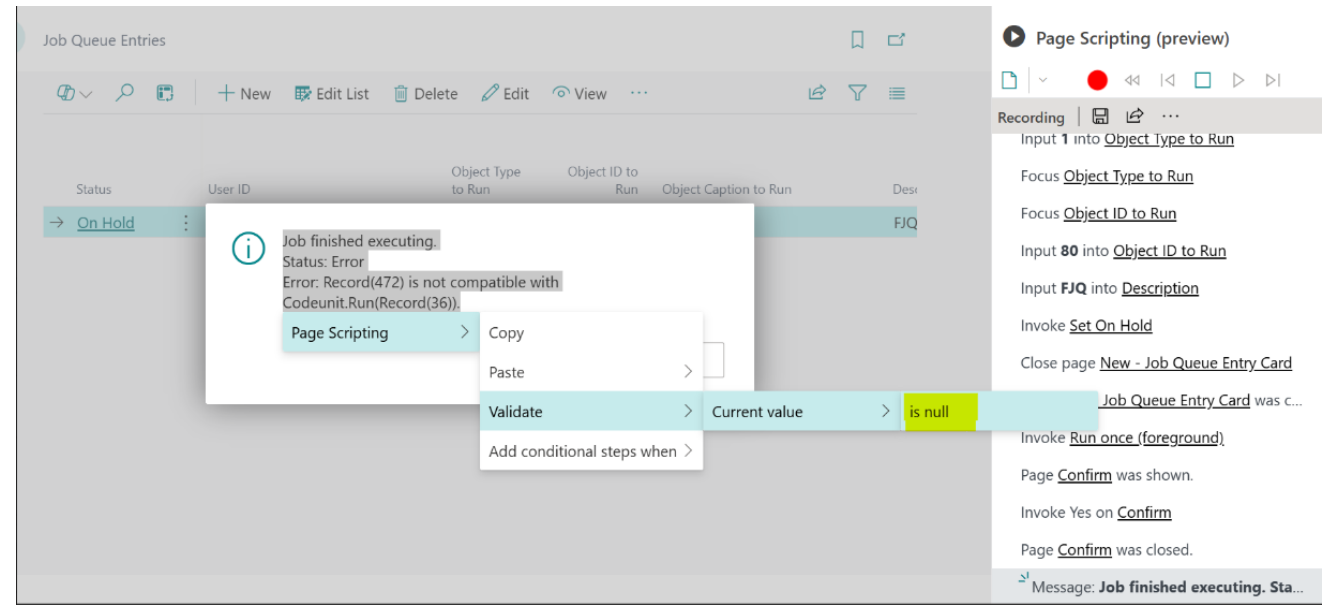

NEW capabilities

Multi-selection in grids

Record selecting several rows in a list, so bulk actions are captured and replay exactly as a user performed them.

Validate text in dialogs

Assert on the text shown in a message or error dialog - turning a recording into a real check, not just a click-through.

Validating the text of an error message dialog

Server and Database Enhancements

Boost Business Central performance, scalability, and visibility with platform enhancements across runtime, database, reporting, security, and administration.

- Major database performance gains from inline table extension storage
- New index management capabilities.
- Security enhancements with better usage of permissions overview and partner telemetry on Open in Excel actions
